| Date          | 29 September 2026                                        |
| Team ID       | SWTID-2026-3226                                          |
| Project Name  | FitBuddy – AI Fitness Plan Generator using Gemini Models |
| Maximum Marks | 2 Marks                                                  |

## Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through the fitness-planning system—between the user, application processes, Gemini models, and stored profile and plan data.

## DFD Symbol Legend

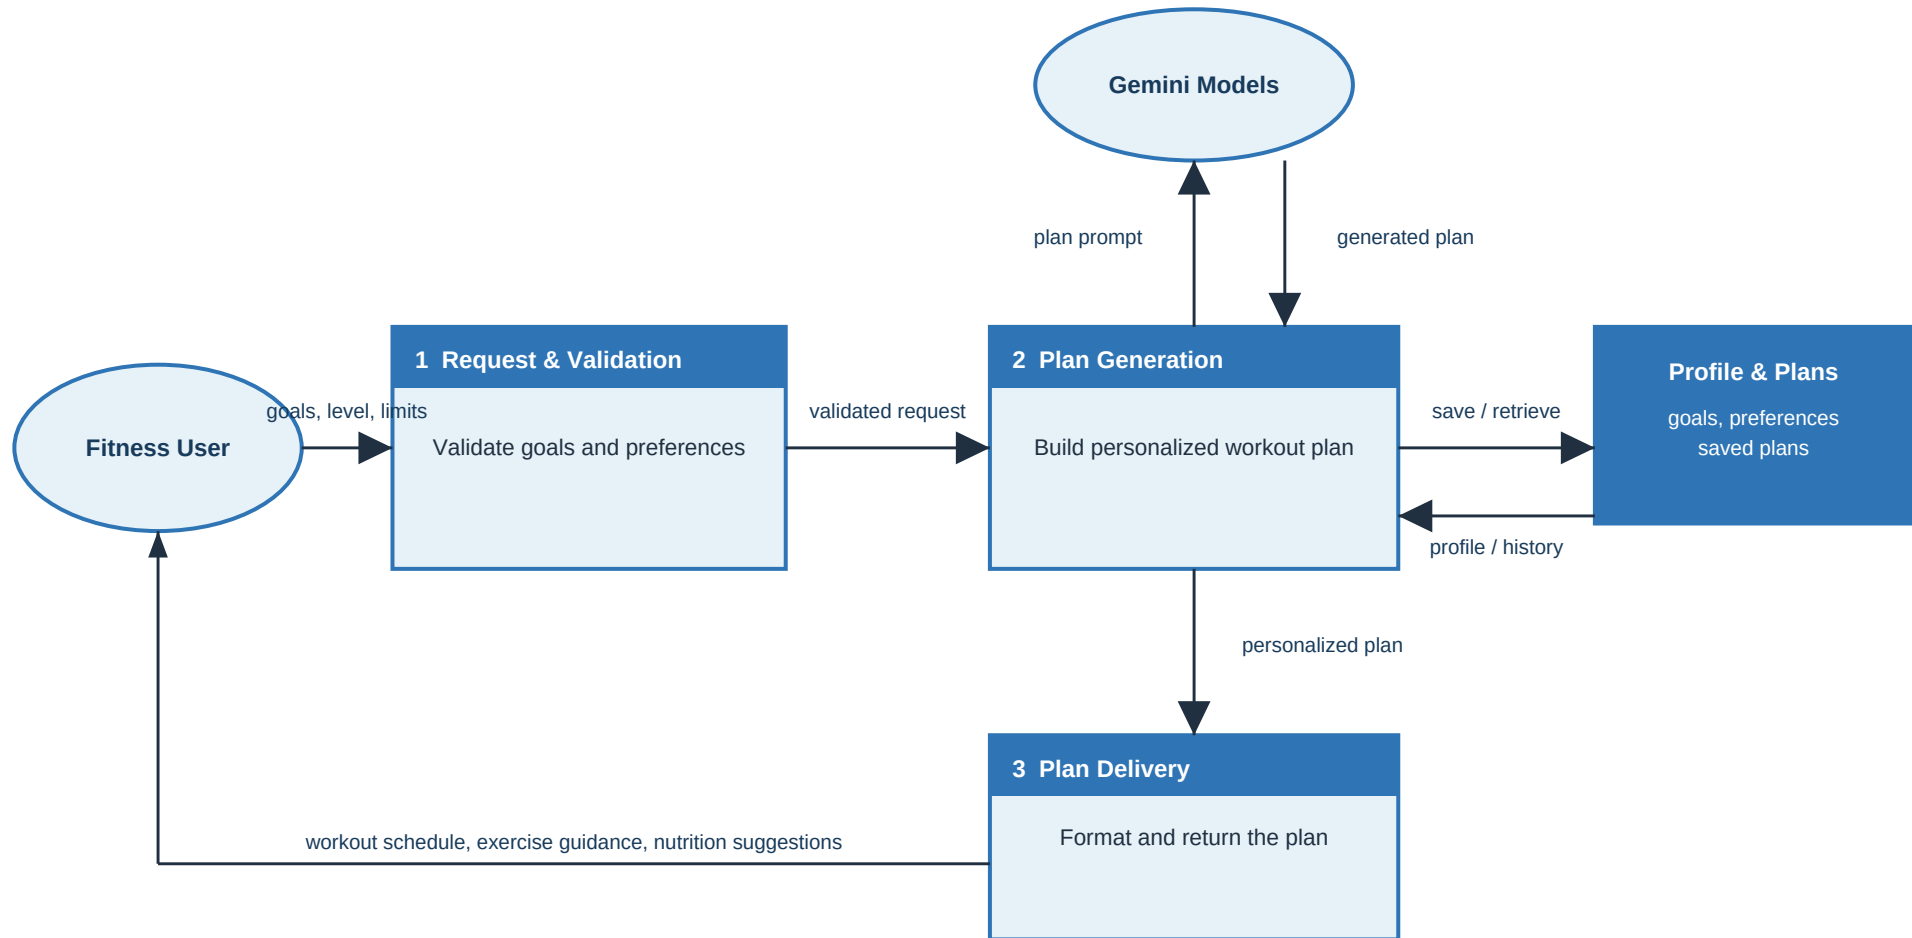

| Symbol                         | Name            | Description                                                      |
|--------------------------------|-----------------|------------------------------------------------------------------|
| Oval / rounded shape           | External Entity | Person or external system interacting with the application.      |
| Rectangle with numbered header | Process         | Activity that transforms incoming data into outgoing data.       |
| Solid rectangle                | Data Store      | Place where user profile or generated plans are kept.            |
| Labeled arrow                  | Data Flow       | Movement of information between entities, processes, and stores. |

## Example

The diagram on the next page shows a user submitting fitness goals, Gemini generating a plan, and FitBuddy returning and saving the personalized result.

# FitBuddy Data Flow Diagram

User goals and profile data are validated, sent to Gemini for plan generation, then returned and stored for future access.

Flow: Fitness User → Request & Validation → Plan Generation → Plan Delivery → Fitness User  
Gemini Models generate a tailored fitness plan from the validated goals, activity level, and preferences.  
Profile & Plans stores user preferences and plan history to support future requests.
